ATEX Portable Radios

The Choice for Professionals in Hazardous Environments

- explosive environment, safe and reliable communications >
- MIL Spec 810E; the quality hallmark of the US military >
- replaces existing Intrinsic Safety directives in EU & EFTA >

ATEX

“ATmospheres EXplosibles”

Mandatory in all EU member states and EFTA countries.

Replaced existing Intrinsic Safety directives in EU & EFTA.

The GP340 THE CHOICE FOR PROFESSIONALS IN HAZARDOUS ENVIRONMENTS

Whether on an oil rig, in a gas installation or another potentially explosive environment, safe and reliable communications are paramount. That is why Motorola has brought together three key elements: its 75 year expertise in communications; its wide experience of producing two-way radios for use in hazardous environments; and its proven Professional Series two-way radio platform.

QUALITY & RELIABILITY

Robust and reliable, all radios have passed Motorola's rigorous Accelerated Life Test which simulates five years of hard use in the field, and are IP54 compliant for use in environments where dust and water ingress can leave other radios standing. In addition, the Motorola Professional Series Portable Radios are designed and built to exceed the 11 applicable tests of the exacting standard MIL Spec 810E; the quality hallmark of the US military.

SAFETY

Press the highly visible orange Emergency Button to initiate the organisation's defined emergency communications procedure.

A separately available third party plug in option board offers 'Mandown' capability. Should the user fall whilst wearing the radio, an emergency procedure is activated.

Additional safety features include a specially-designed battery connection that prevents non-ATEX approved batteries from being fitted to the radios. The lockable accessory connector plug features a tamper-proof screw to control the use of accessories.

PRODUCTIVITY

Avoid missed calls as the Channel Scan function allows activity on different communications channels to be monitored and answered. When working offsite or close to other users, 'Talkaround' lets users communicate without using the system or dispatcher.

ECONOMY

All Motorola Professional Series ATEX radios are supplied with a soft leather carry case and a newly designed Lithium Ion battery that will exceed the capacity requirements of most shifts. Organisations that already maintain Motorola Professional Series Portable Radio fleets can use existing vehicle adaptors and chargers.

CUSTOMISABLE

The GP340 Ex, GP380 Ex, GP580 Ex and GP680 Ex are supported by a range of ATEX-approved audio accessories including headsets, remote speaker microphones and earpieces tailored to the requirements of today's radio users.
